

TerraTec

High Quality Audio Decoder

M3Po – start the party.

The TerraTec m3po is a high-quality CD player meant to round out a conventional hi-fi system. The device plays MP3 as well as conventional CDs. Regardless of whether or not you buy them in a store or burn them yourself: after inserting a CD M3Po searches the medium for MP3 files and playlists. It doesn't matter which directory they are located in. Using a wheel, titles can be selected and started very easily thanks to clear and comfortable menu directions.

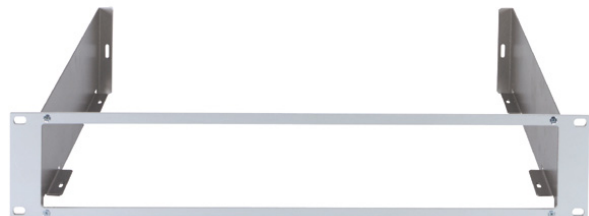

But there's more: in addition to the built-in CD drive, it's possible to easily retrofit a conventional IDE hard disk! This lets you transfer the compressed audio files and the associated playlists to the hard disk. Considering that a 30 GB HDD contains more than 546 hours (or 3 weeks!) of music, TerraTec's M3Po will soon put an abrupt end to all storage problems!

2001 compatible. Of course, the player looks as good as it sounds. The stylish as well as functional aluminum design cuts a fine figure in living-rooms, on barbecues, or the never ending birthday party of the mother-in-law. Its variable LC display rounds out the elegant appearance and stylistically arms the unit for the new millennium.

That MP3 files can be found illegally distributed by the millions on the Internet, can be clearly seen on the monthly CD-ROM from Kepton (www.kepton.de) which includes scientific contributions from "Deutschlandfunk", a German radio station. TerraTec's M3Po includes a complete edition – as well as a whole variety of other features. And the streamlined remote control lets you operate the most important functions – even such as the volume of the adjustable headset amplifier – while lazing in your deckchair.

M3Po rackit!

The M3Po rackit! speaks for itself as the rack system solution for the M3Po. With it you can integrate your MP3-CD-player in a 19" rack. The 19" rack system is increasingly popular with musicians and pro's and has 2 levels.

TerraTec

High Quality Audio Decoder

Technical Specifications

- Playback of MP3 files direct from CD
- Playback of normal audio CDs
- Support for playlists in the popular M3U format
- Additional installation space for a conventional 3,5 inch AT-bus hard disc
- Supports ISO9660/Joliet and FAT16/32 file systems on CD and hard disc
- MP3 data over internet, album and title (ID TAGS) are read and directly shown in the display
- All MPEG audio bit rates, scan rates and variable bit rate streams (8-48 kHz, 8-320 kbps) are supported
- Clear and practically-oriented infrared remote control
- Variable playback speed with no change in pitch
- Quick access to titles using the wheel
- Title list saved in the internal RAM
- Special playback modes for a variety of uses
- Later update of the operating system is possible through CD-ROM
- 32-bit RISC processor for controls
- HighQuality MPEG decoder from Microna's Intermetall

Outputs

- Line Out (Cinch)
- Separately adjustable headphone output (6,5 mm jack)

Art.No.: 3150
