

DESCRIPTION

SINE SLM 162

16 Channel Stereo Line Mixer

Does your keyboarder need a preliminary mix of his synthesizers on stage? Would you like to organize your studio mixing desk by grouping your synthesizers? Does your guitarist want to get a handle on his effects devices? And do you want to solve all of these problems with a device that takes up as little space as possible? Then TerraTec's rack mixers are the perfect solution.

The model SINE SLM 162 will cover all of your requirements. It has as many input channels as you need: 16 (or 8 stereo pairs). The SINE SLM 162 has two outputs, a master volume control and one volume and balance control per input pair.

And because good racks are expensive and space in them is always in short supply, we fit all of these features into a

1U 19" housing. We didn't sacrifice quality to achieve this, however. With a signal-to-noise ratio of >97 dB and a frequency response of 20 Hz – 20 KHz, noise isn't an issue and signals pass through the mixer without losses.

Compact design, excellent technology and outstanding audio properties – and all for the price that you would ordinarily pay for a package of high-quality cables.

- 8 stereo channel pairs with a total of 16 inputs and 2 outputs
- Volume and balance controls for each input channel pair
- Master volume
- LED level display for the output
- Signal-to-noise ratio > 97 dB
